A mobile phone or cell phone is a portable telephone that allows users to make

and receive calls over a radio frequency link while moving within a designated

telephone service area, unlike fixed-location phones (landline phones).

This radio frequency link connects to the switching systems of a mobile phone operator

providing access to the public switched telephone network (PSTN). Modern mobile telephony

relies on a cellular network architecture, which is why mobile phones are often referred to as 'cell phones' in North America.
